MORBIDITY REPORT

Week No.: 53
Ending: January 3, 1981*
+ Special Report

	This Week			Reported To Date		
	1980	1979	1978	1980	1979	1978
Aseptic Meningitis	1			17	34	32
Encephalitis, Primary						
Encephalitis, Post-Infectious				10	9	9
Giardia	2			164	61	
Hepatitis, Infectious (A)	1			143	164	242
Hepatitis, Serum (B)				18	22	28
Hepatitis, Unspecified				10	2	29
Measles				2	56	108
Meningococcal Disease				4	16	7
Mumps						
Pertussis				3	14	12
Rabies in Animals				56	8	19
Rubella				45	68	22
Salmonella				165	75	43
Shigella				32	144	128
Tuberculosis (New Cases)	1			33	40	65
Venereal Disease						
Gonorrhea	18			1508	2086	2268
Syphilis, Prim/Sec	3			6	9	

OTHER REPORTABLE DISEASES:

*When the last week of the year has less than 3 days.

+Influenza A isolated at State Laboratory from throat swab specimen submitted for a 25 year old male whose usual residence is Massachusetts, but a visitor to Helena during December, 1980. The virus isolated is similar to A/Bangkok 1/79 H_3N_2.

DELAYED REPORTS: 1 Aseptic Meningitis -- Cascade
1 Hepatitis A -- Big Horn
1 Giardia -- Missoula

Tuberculosis (New Cases)		2	1	6	5	4
Venereal Disease						
Gonorrhea	13	22	53	217	202	341
Syphilis, Prim/Sec				3		

OTHER REPORTABLE DISEASES:

*Special Report 1 Salmonella typhi - Lewis & Clark; 2 Influenza A - 1 Cascade;1 Mineral

TOLL-FREE HOTLINE TO BE ELIMINATED

Effective March 31, 1981, the Preventive Health Services Bureau's communicable disease hot line will be removed. The hotline, begun as a VD hotline and later expanded for use as a communicable disease reporting and surveillance tool, has been in operation since 1973. Budgetary restrictions and cut-backs necessitate this action.

Beginning April 1, 1981, persons wishing to contact Preventive Health Services Bureau staff should call our regular commercial number: 449-2645.

OTHER REPORTABLE DISEASES:

1 Colorado Tick Fever - Ravalli; 1 Primary Syphilis - Custer; 2 Rocky Mtn. Spotted Fever - Missoula; Big Horn; 1 Kawasaki's Disease - Missoula

Measles in Migrant Populations

Since January 1981, over 180 cases of measles have been reported from Texas. Almost half of these cases have been in children under 15 months, below the age at which measles vaccine is routinely recommended. High hospitalization and pneumonia rates have resulted.

The largest population of migrant workers in the U.S. reside in south Texas during the winter months, and these migrants have been recently moving north into other areas -- including Montana.

We urge following the recommendations of the Public Health Service Immigration Practices Advisory Committee for the control of measles during periods of increased transmission.

1. All migrant infants 6 to 11 months of age (up to the 1st birthday) should receive one dose of single antigen measles vaccine; these infants must be revaccinated at 15 months with MMR vaccine.
2. Migrant children 12 months of age should receive the MMR vaccine and need not be revaccinated.
3. Unvaccinated migrant children over 12 months of age should also receive MMR.
